Hydrology Analysis

Installation

Only necessary to run this cell once to set up local machine

```
install.packages('tidyverse', repos='http://cran.us.r-project.org')
```

```
##
## The downloaded binary packages are in
##  /var/folders/r_/4w9b5lnx7n542qjy74wfz0hr0000gn/T//RtmpjvP3WE/downloaded_packages
```

Set up Environment

Loads the Tidyverse and imports necessary functions

```
library(tidyverse)
```

```
## -- Attaching packages --------------------------------------- tidyverse 1.3.1 --

## v ggplot2 3.3.3     v purrr   0.3.4
## v tibble  3.1.1     v dplyr   1.0.5
## v tidyr   1.1.3     v stringr 1.4.0
## v readr   2.1.2     v forcats 0.5.1

## -- Conflicts ------------------------------------------ tidyverse_conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()    masks stats::lag()
```

```
source('./Rcode/utils.R')
```

```
##
## Attaching package: 'lubridate'

## The following objects are masked from 'package:base':
##
##     date, intersect, setdiff, union
```

Read Data

To run the programs on your desired file, set `inputFile` to the appropriate file path

```
inputFile <- './Data_Raw/MercedHI_Q_T_2022023.txt' # Set to appropriate file
data <- readUsgsData(inputFile, startDate = ymd('1915-10-01'))
```

```
## Rows: 38755 Columns: 2-- Column specification --------------------------------------------------------
## Delimiter: "\t"
## dbl  (1): X12
## date (1): X3
## i Use `spec()` to retrieve the full column specification for this data.
## i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

Generate and Analyze Output

There are two cells each R program: the first will generate output and store it in the `./Output/` folder, and the second gives space to produce visualizations of the output

surfwtr.R Generate output

```
source('./Rcode/surfwtr.R')
surfwtrOutput <- surfwtr(data)
summarizeOutput(surfwtrOutput)
```

```
##                    mean      stdDev          min       median          max
